

Context
SPECS

- Your task is to let the user set the corner for each element
- The element supports many more styles but for this challenge we focus on the corners design
- The element supports different style values for each breakpoint. For simplicity of this challenge we assume there is only one breakpoint
- The user should be able to change all borders at once by pressing the "link" button
- The user should also be able to set each corner individually

in the Corners panel is possible to edit the radius, the value are linked by the constraint button, which by default is activated

by editing one of them, all get the same value as they are linked.

by unlinking the values is possible to edit each one individually
